Preface

Food packaging is a dynamic and ever evolving field essential for ensuring safety and quality of food products but also meeting the growing consumer demand for sustainability, convenience and innovation. The role of packaging is pivotal in food industry. Food packaging aids in preserving the freshness of the food, may enhance shelf life of the food and communicate the vital information to the consumers. With the advent of globalization there are challenges of developing packaging solutions which are effective efficient and specific to the food product.

The manual is designed to provide a thorough hands-on guide to the multi facilitated world of food packaging. It offers detailed exploration of the principal, practices, technologies that underlie packaging processes and assessment of packaging material. The manual serves as a reference for industry professionals and is an educational tool for the students. The manual offers insights into the key considerations involved in food packaging design, material selection, sustainability effort and regulatory requirements. Throughout the manual we explore assessment of variety of materials available for food packaging including glass, metal, plastics and paper. Special attention is given to the growing importance of sustainable packaging practices including biodegradable and recyclable materials. Step-by-step instructions and practical examples are included to help illustrate key concepts and techniques.

We hope that this manual serves as a valuable resource providing you with a comprehensive understanding of the complexities and best practices in food packaging. We believe you will be better equipped to face the challenge and opportunities that lie ahead in this essential and evolving industry.

Contents

<i>Preface</i>	v
<i>Index</i>	ix
1. Identification of Plastic Using Floatation Method	1
2. Demonstration of Operation of Vacuum Packaging Machine	7
3. Testing of Packaging Material and Package	27
4. Testing of Thermal Shock Resistance of Glass	53
5. Study of Water Vapor Transmission Rate of Packaging Materials	61
6. Development of Biodegradable Film	67
7. Designing a Food Label for Food Product	77
8. Determination of porosity of Tin Plate	83
9. Examination of Can Double Seam	89

Index

S. No.	Experiment	Date	Page No.	Teacher's Signature
1	Identification of plastic using floatation method			
2	Demonstration of the operation of Form Fill and Seal packaging machinery, Shrink Wrap, Gas or vacuum packaging of food & shelf-life studies			
3	Testing of packaging material and package			
4	Testing of thermal shock resistance of glass			
5	Study of water vapor transmission rate of packaging material			
6	Development of biodegradable film			
7	Design a package label			
8	Study porosity of tin plate			
9	Examination of can double seam
